# From Smart Meter to Smart Bill

Geert Janssen

Ferranti Computer Systems

Bruges Oct 10 2007

- About Ferranti
- Challenges in the liberalised Energy Market
- Smart Bill as a differentiator that can make the difference
- Customer Cases

- Operating since 1976
- Part of the Nijkerk Group
- Presence
  - Belgium
  - The Netherlands
  - France
- Partner Strategy for E-CEE-countries

The reference ERP CRM Solution to empower Energy, Water And Utility Companies

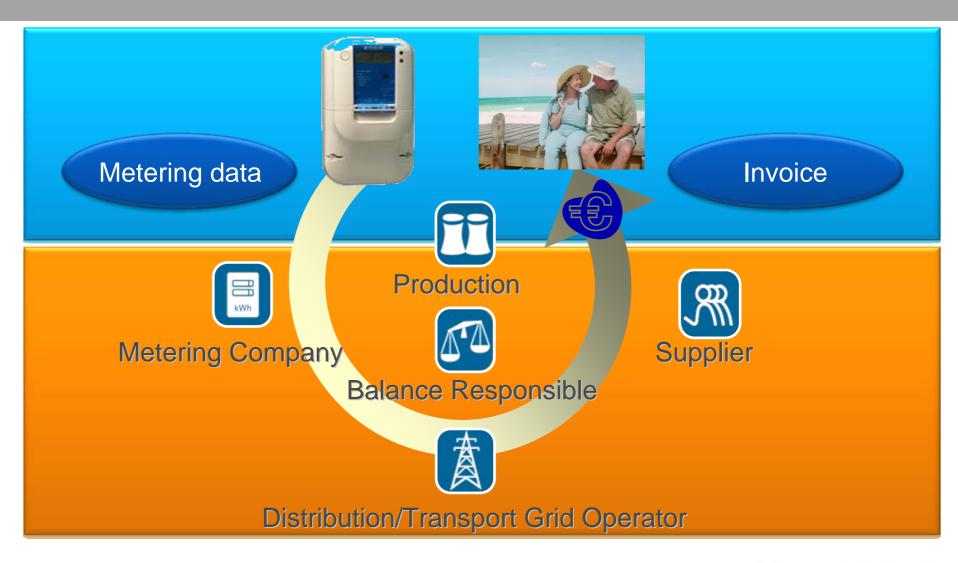

Empowers companies by supporting meter-to-cash processes for different market parties in liberalised and non-liberalised Energy & Utilities Market

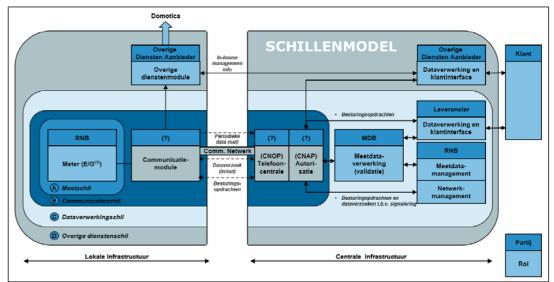

- New regulation
- New structures (unbundling)
- New players

- New information exchange
- New niche players

Dutch Marketmodel

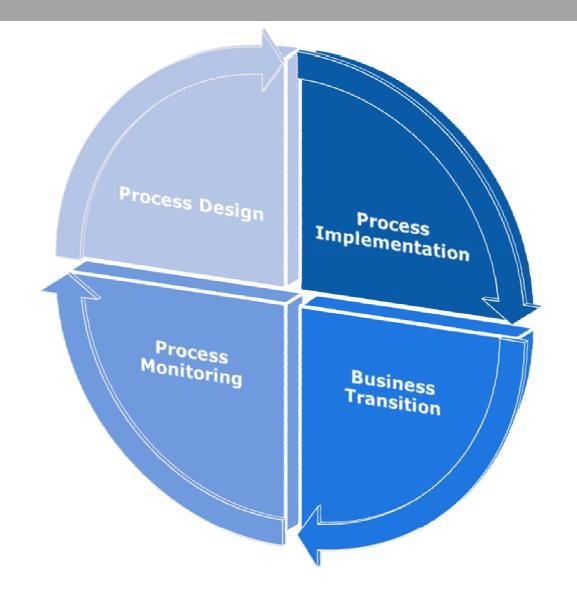

- What about standards
- Ownership Marketmodel
- How to manage Roll-Out
- Impact on Asset Management
- Granularity of data exchange
  - Legislation
  - Additional service to market players

FERRANTI computer systems

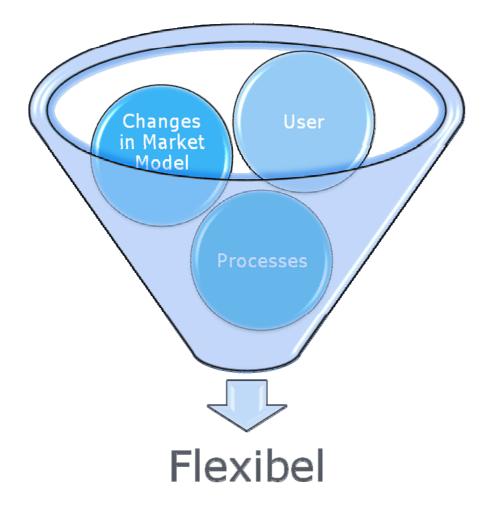

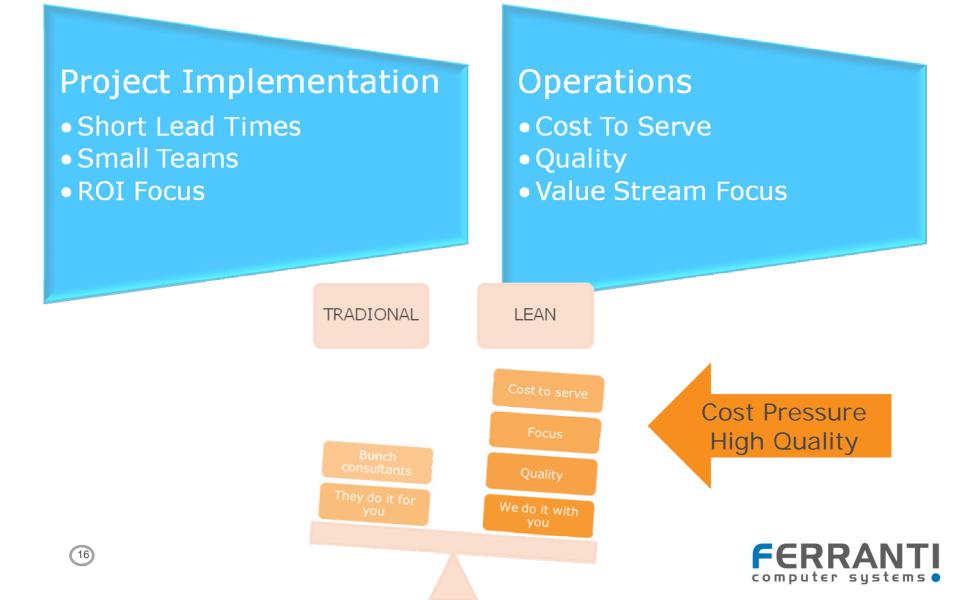

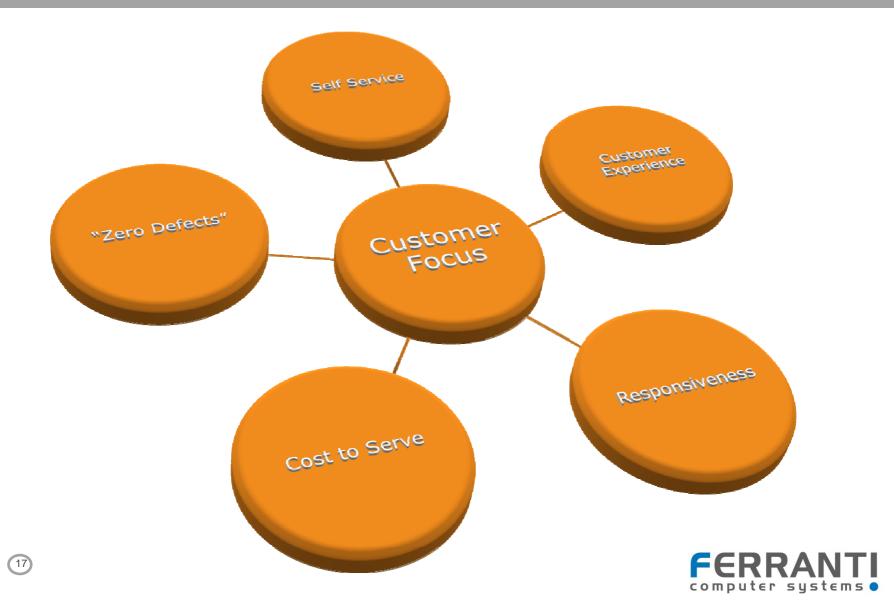

- Until now, not too many customers have switched in the liberalised market
- Satisfiers switch
  - Price-Leadership
  - Supplier Image
- Dissatisfiers switch (call-center calls)
  - Unclear bills
  - Incorrect bills

# A profitable way to differentiate – Smart Bill

- Develop unique value propositions and contracts
- Go for real segmentation
- Personalisation / presentation bill
- Give insight in how bill is calculated and foresee reconciliation
- Offer the right payment models that fits the bill

- HVC is a Dutch waste treatment company that aims at effective waste management from both an economic and environmental point of view. Its main activities are the collection of waste and treatment by composting & recycling, logistics and incineration & energy generation.
- The waste treatment plants in Alkmaar and Dordrecht represent a total electricity production capacity of approximately 100 megawatt.
- This "green" energy will be offered primarily as a consumer product. HVCenergie was looking for a system to manage all the processes involved with the generation and sale of energy.
- Customer profile phase 1 municipalities & related employees

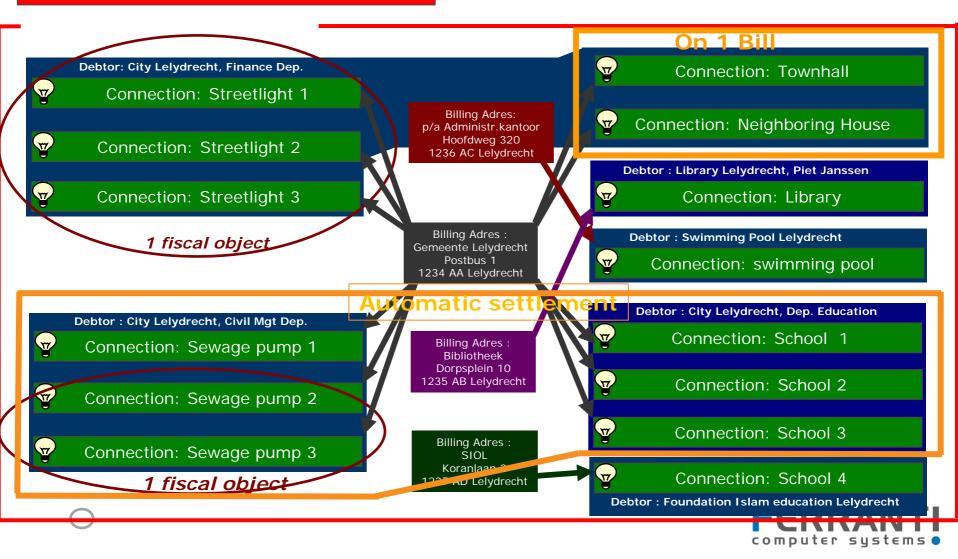

- Be ready for Smart Metering
- Electronic Bill Presentment
- Periodical Billing
- Minimize Control effort
- 1 Contract partner, multiple debtors
- Billing by type, subgroup, department, ...
- Multiple choice payment methods
- Typical legislations (multisite / municipalities)
  - Tax rules are based on consumption by connection
  - Tax rates are calculated on volume slices (declining)
  - Connections can be grouped to optimize tax-ruling

### Contract Owner: City Lelydrecht

RWE is a German gas and electricity supplier. The company bought two existing energy companies in the Netherlands and supplies major consumers with energy under its own brand since the beginning of 2007.

- RWE Nederland uses MECOMS to gather metering data and to bill its B2B customers.
- "Real Load Profiles" is a standard functionality in MECOMS. It processes all 15 min values that enter the system via EDI-messages from the metering company. As such, RWE disposes of 96 metering values a day for each customer. Based on the contract these values are linked in MECOMS to the most recent electricity prices generated from the APX-energy exchange. Accordingly, RWE is able to very accurately bill its customers. Obviously other forms of contracts are also supported.

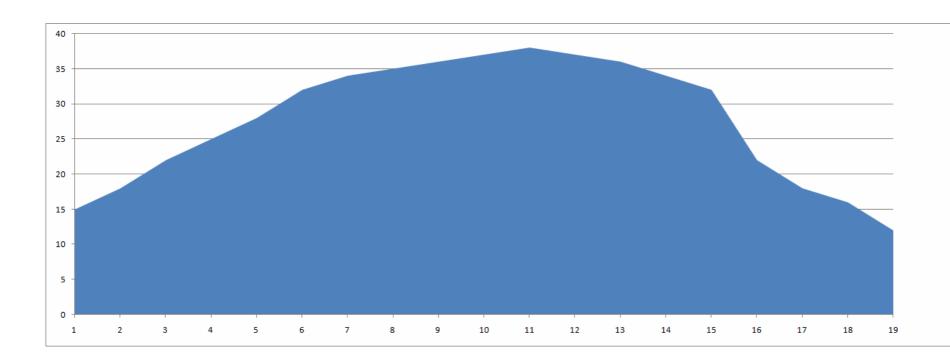

- Structured Layout based on individual contract
- All Source Data available for the customer
- Graphical Display AMR
- Near-time Billing based on counter values of Real Load Profiles
- Validation controls and other mechanisms to prevent mistakes before sending bill to customer
- Automatic settlement based on Validated consumptions
- Separation of duties
- Multiple correction mechanisms flexible choice creditnote and re-bill, bill the difference, corrections on next invoice)

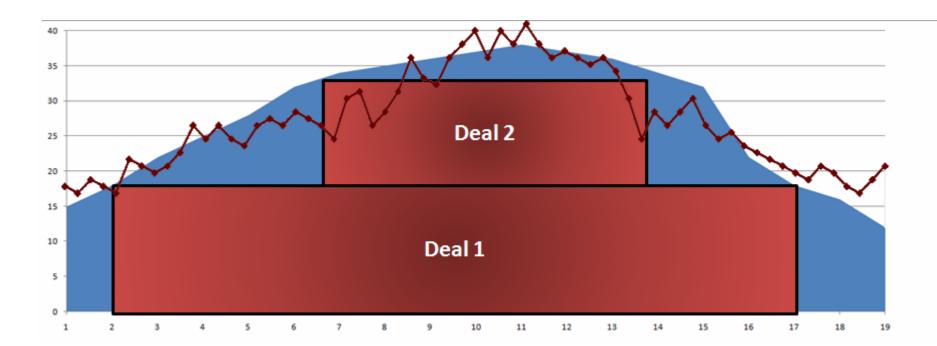

F

Yearly Profile

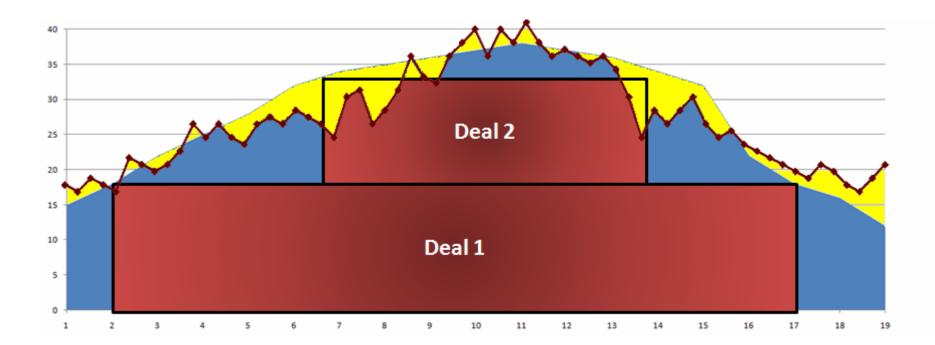

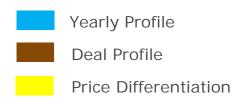

P

F

- Creative Billing
- Deal and subdeal model with the customer based on yearly profile
- Price difference due to deviation of forecasted consumption based on multiple indices
  - APX pricing
  - Unbalance pricing
- Digital invoicing and data communication
- Electronic Bill Presentment
- Reconciliation Real Load Profile Forecast
- Detailed information for Trading & Forecasting

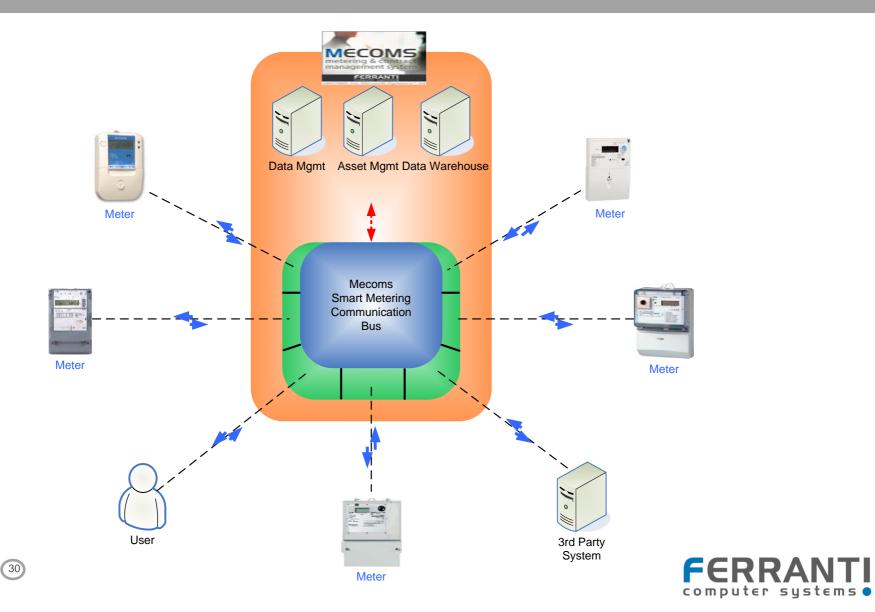

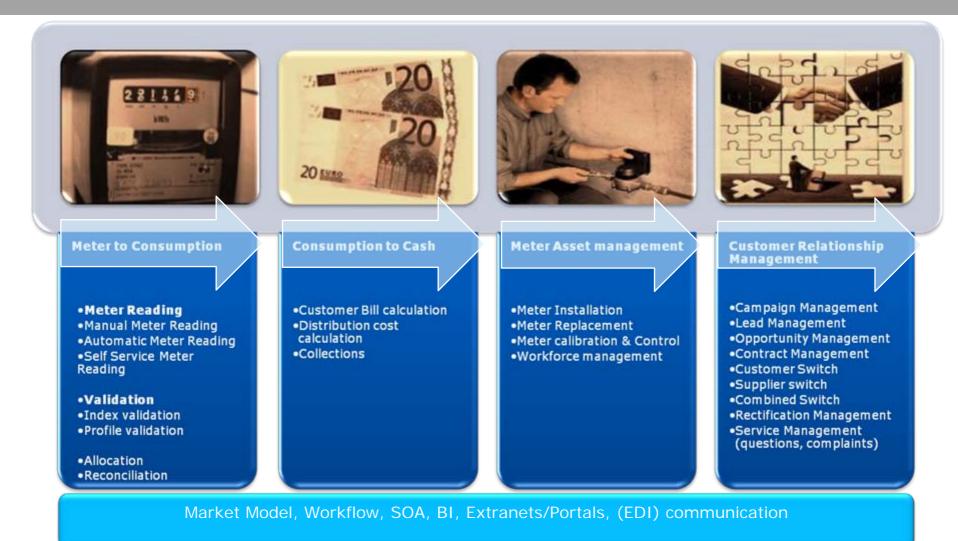

- Customer Focus
- Flexibility at acceptable cost
- Empowerment of users
- Designed to operate in heterogeneous environments - Middleware Linking together previously fragmented data
- Provide customised intelligence to gain better and faster insight to support better business decisions
- Automatically sense and respond to potential bottlenecks
- Functional breath and depth

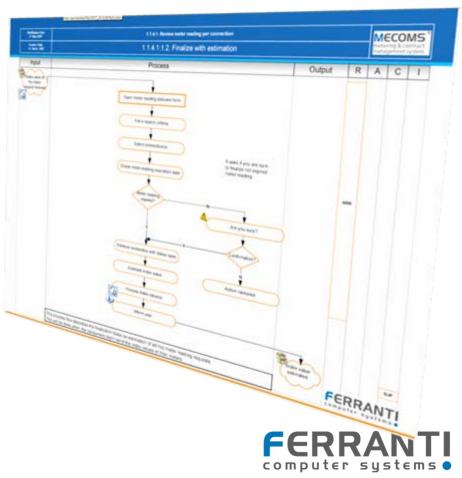

FERRANTI computer systems

F

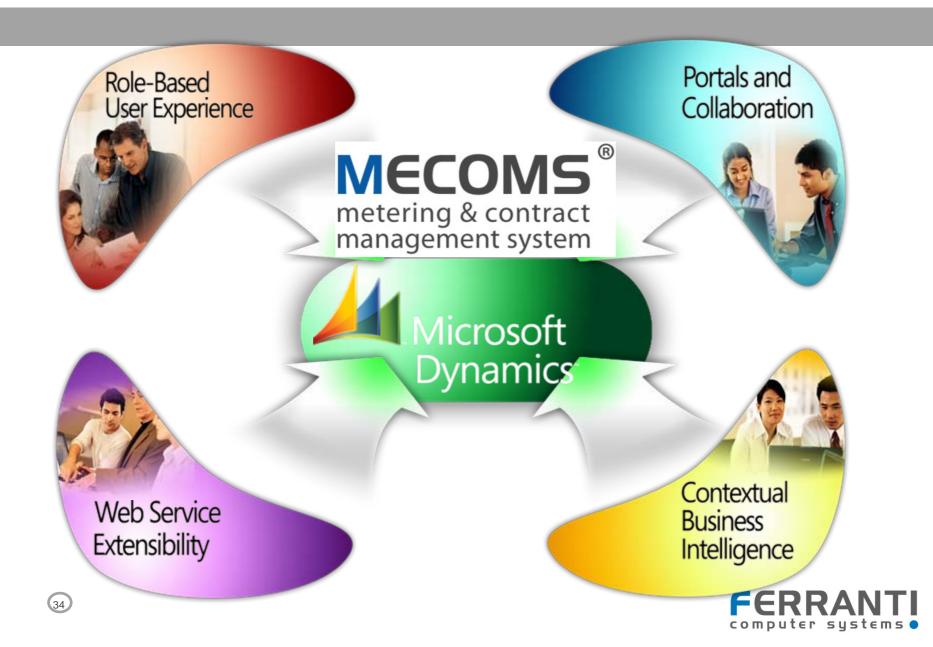

Improving organizations by providing business insights to **all** employees leading to better, faster, more relevant decisions

- Integrated platform and applications
- Secure and personalized
  - Collaborative
- Cost effective and comprehensive

# Familiar & easy to use

people<u>l</u> ready

Widely used and supported

Easier to integrate and connect with what you have

35

Innovative and continually evolves to meet your needs

- Supplier point of view Smart Metering enables
  - Customer segmentation with tailored value propositions
  - Individual contract management and smart billing
  - Creative business models and offerings
  - Customer win & retention strategies
- Requires flexible process-driven backoffice systems to support meter-to-cash processes and to react to changing market conditions with required agility
