

PowerMatchingCity-II

New use cases

René Kamphuis, TNO and TU/Eindhoven

Contents:

Introduction

- › PowerMatcher intro; modelling
- › Context PowerMatchingCity-I / Hoogkerk
- › Results PMC-I

New Use cases

- › Wholesale processes
- › Billing
- › EV propositions
- › Network asset optimization and management

Hoogkerk living lab environment

- › Established in the Integral-project
 - › EU-FP7: <http://www.integral-eu.com>
 - › VPP established
 - › 25 households with heating system + heat storage connected
 - › 50 % Stirling micro-CHP
 - › 50 % Hybrid Air-to-air heatpump/Gas fired boiler
 - › PV
 - › Wind
 - › 2 EV's
 - › Operated in 7 use case applications
 - › Coordinated via PowerMatcher-technology

Setting

In-Home Optimization

Cost Effective use of Energy

Commercial Optimization

Virtual Power Plants

Integration of Renewable Energy

Valorization and imbalance Reduction

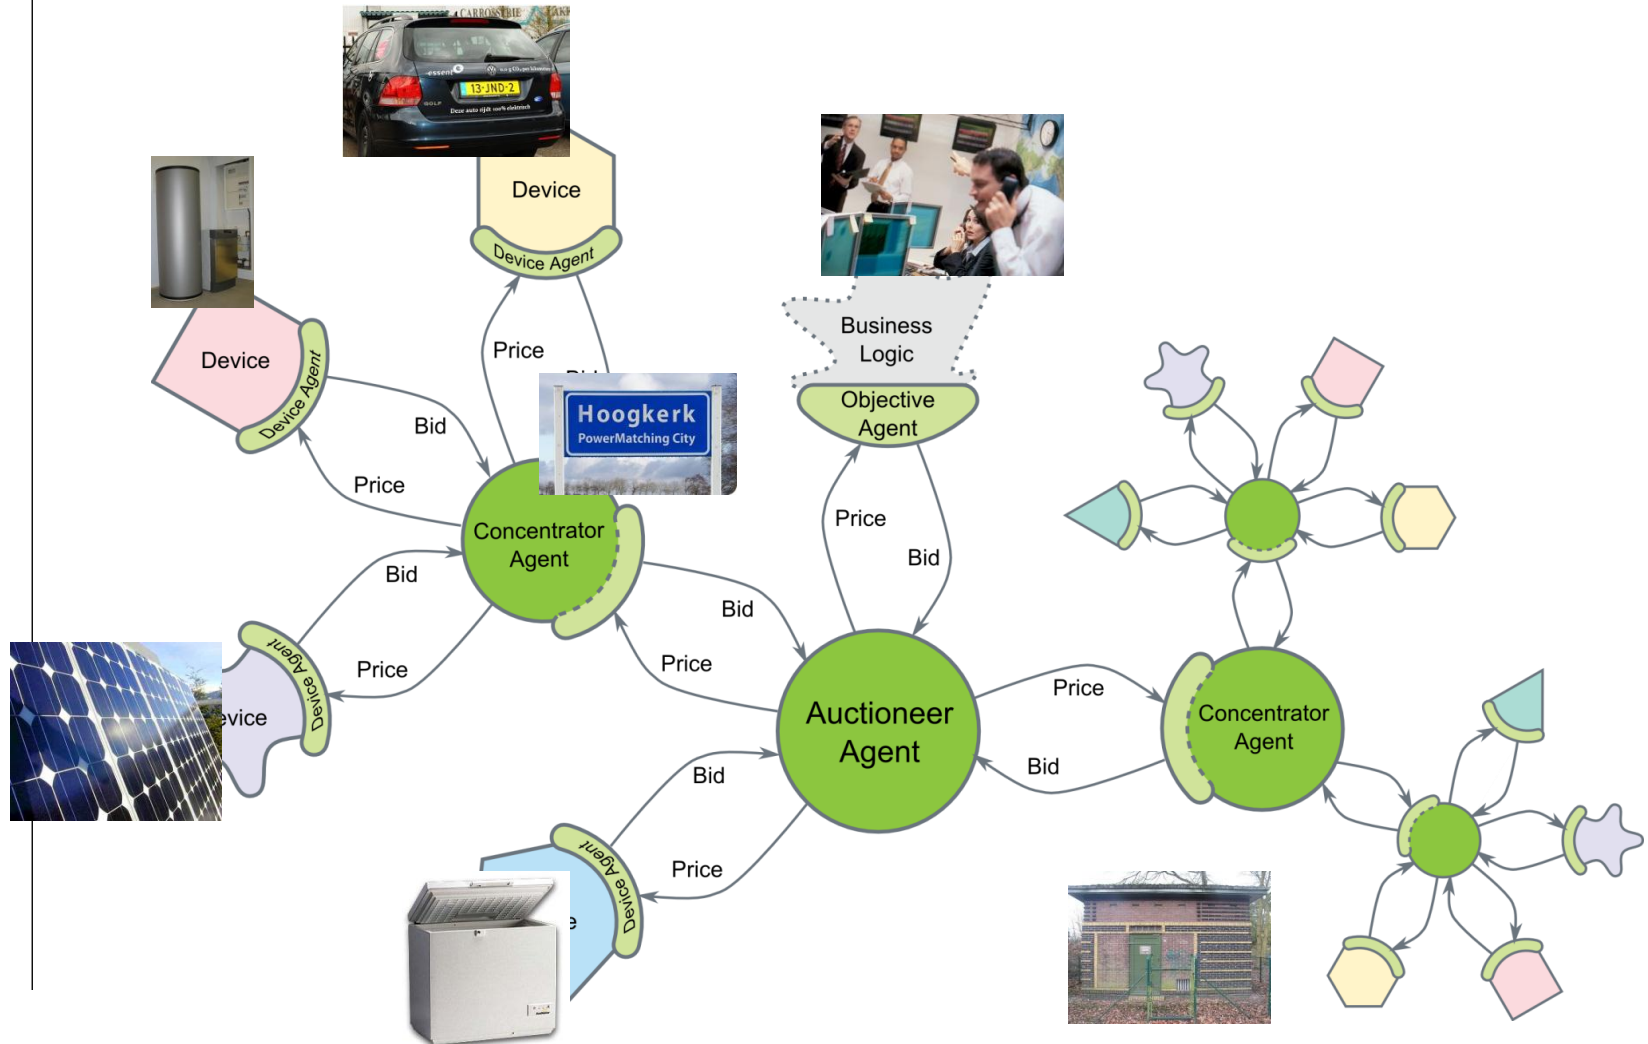

Capacity Management

Reduce Peak Loads

P•OWERMATCHER
 smartgrid technology

Tools

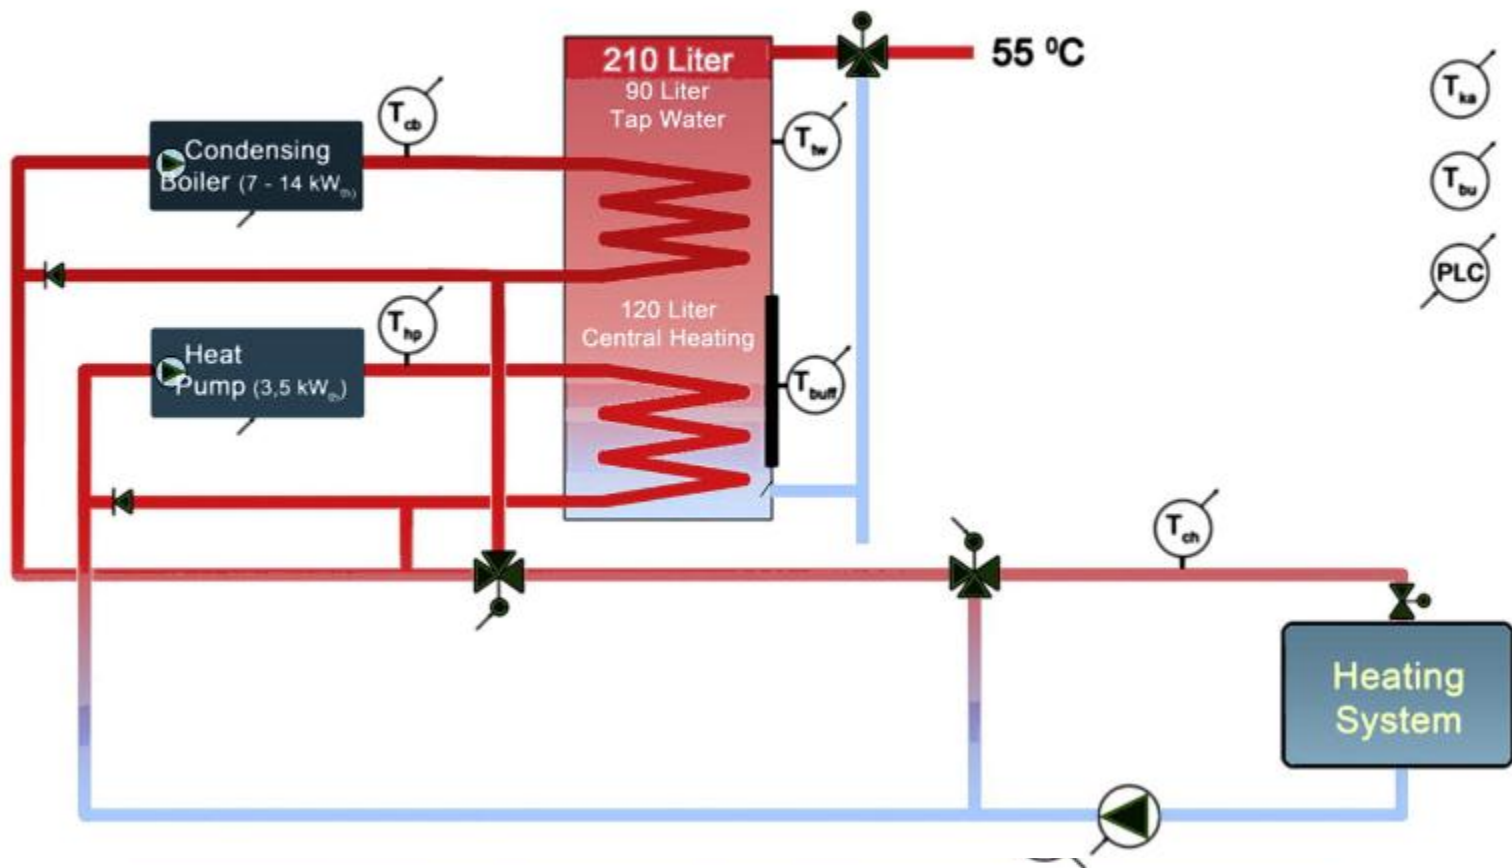

Types of agents

- › Device agents: represent consuming and generating devices
- › Concentrator agents:
 - › Sum bid-curves of connected devices
 - › Can apply transform on aggregated bidcurve
 - › Coupled to home level
 - › Coupled to a physical component of the grid
- › Objective agents
 - › Strive optimisation goal
 - › Coupled to use cases : e.g. TDOA Trade Dispatch Objective Agent
- › Auctioneer agents

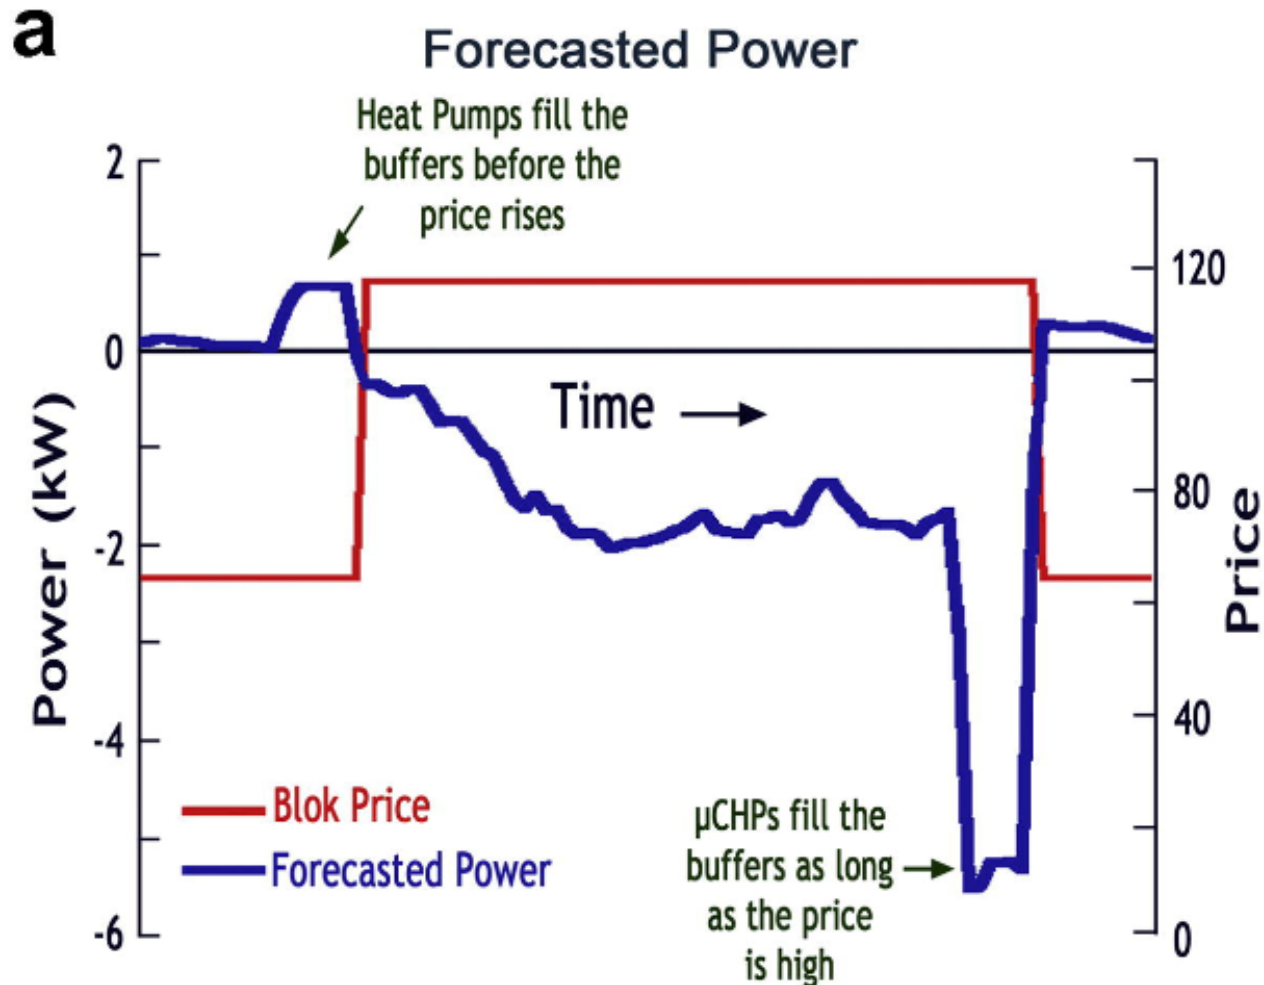

Demand response potential: Heating buffer

a Hybrid Heat Pump System

TDOA: Pre-emptive charging of heat buffers – Hybrid approach: Optimization on forecast and real-time adjustment

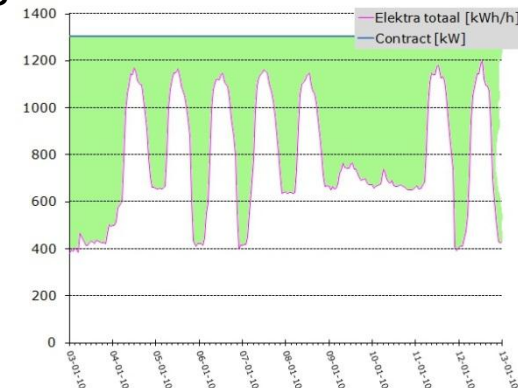

Continuation PMC-II

- › PowerMatcherCity II (IPIN-project; Dutch SmartGrid program)
 - › More heterogeneous cluster with more device types (scheduling dishwasher/washing machine)
 - › Requirements for a 'Distribution-Agent' in a residential area
 - › Coupling of agent transactions to wholesale processes
 - › Coupling of agent transactions to billing processes
 - › Agents on mainstream ICT platform -> embedded systems
 - › Improved agent price models (marginal prices)
 - › Capacity management EV charging in buildings

- › According to emerging standards
- › As a time-dependent capacity proposition
- › Safe fast-charging
- › Billing and grid transaction communication

Continuation PMC-II

- › User portal
 - › Community formation and marketplace for communities; new role of retailer as mediator between communities
 - › One app on SmartPhone for energy management
